

NOMASIGN INFO PACK

Enterprise-grade digital signing. Small-business price.

Every document sealed the moment you send it, Adobe-trusted and tamper-proof, with a full API to automate it. Signed in minutes, not days.

R99/month, unlimited documents

Signers don't need an account

Legally valid under the ECT Act

INSIDE

What is NomaSign · How it works · Proof, not promises · Why only R99 · Pricing & next steps

— What is NomaSign?

NomaSign is digital signing, think DocuSign, without the enterprise price tag. Every document is sealed the moment you send it, so it stays Adobe-trusted and tamper-proof. The whole flow can be automated through our API, webhooks, and integrations.

It costs R99 a month because we do one thing brilliantly, getting documents signed securely, and we build on the Microsoft 365 or Google Workspace you already pay for instead of running a whole document management system for you. Your files are stored in your own cloud, so your data stays more private, not less.

Unlimited documents. Signers don't need an account. Free trial, no card needed.

— At a glance

Price	R99/month (annual) or R149/month (monthly), unlimited documents
Sealing	Adobe-trusted certificate applied the moment you send
Signer experience	Browser-based, any device, no account, under 2 minutes
Storage	Your own OneDrive or Google Drive, we don't store your documents
Legal	Legally valid under the ECT Act, full evidence trail
Automation	REST API, webhooks, templates, bulk send

R99

per month, unlimited documents

30 sec

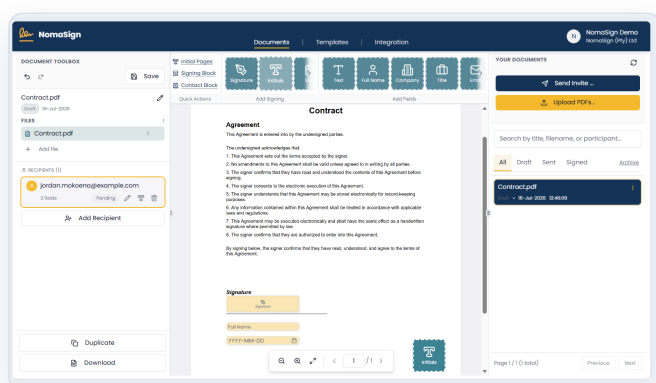

for your client to sign, no account

documents stored on our servers

How it works, in five steps

- 1 Upload your document**
 From your computer, OneDrive, or Google Drive, or send a PDF straight from your browser with our Chrome and Edge extensions. Multiple documents can go in one request.
- 2 Add signers and fields**
 Enter email addresses, then drag signature, initials, name, and date fields onto the page. Save frequently used documents as templates.
- 3 Send. This is where NomaSign is different.**
 The moment you click send, the document is certified and sealed with our Adobe-trusted certificate, before anyone has signed. From that point, only signing is possible; any other change would visibly break the seal. Invitations go out from your own email, so they land in inboxes, not spam folders.
- 4 Signers sign in seconds**
 They click the link, review in their browser, and sign by typing, drawing, or uploading. No account, no app, works on any phone. Each signature becomes its own sealed, timestamped revision of the document.
- 5 Done, and provably done**
 The completed document, closed with an independent trusted timestamp, is saved to your own cloud storage. Open it in Adobe: a banner confirms the document is certified and all signatures are valid.

Prepare: drag fields onto your document

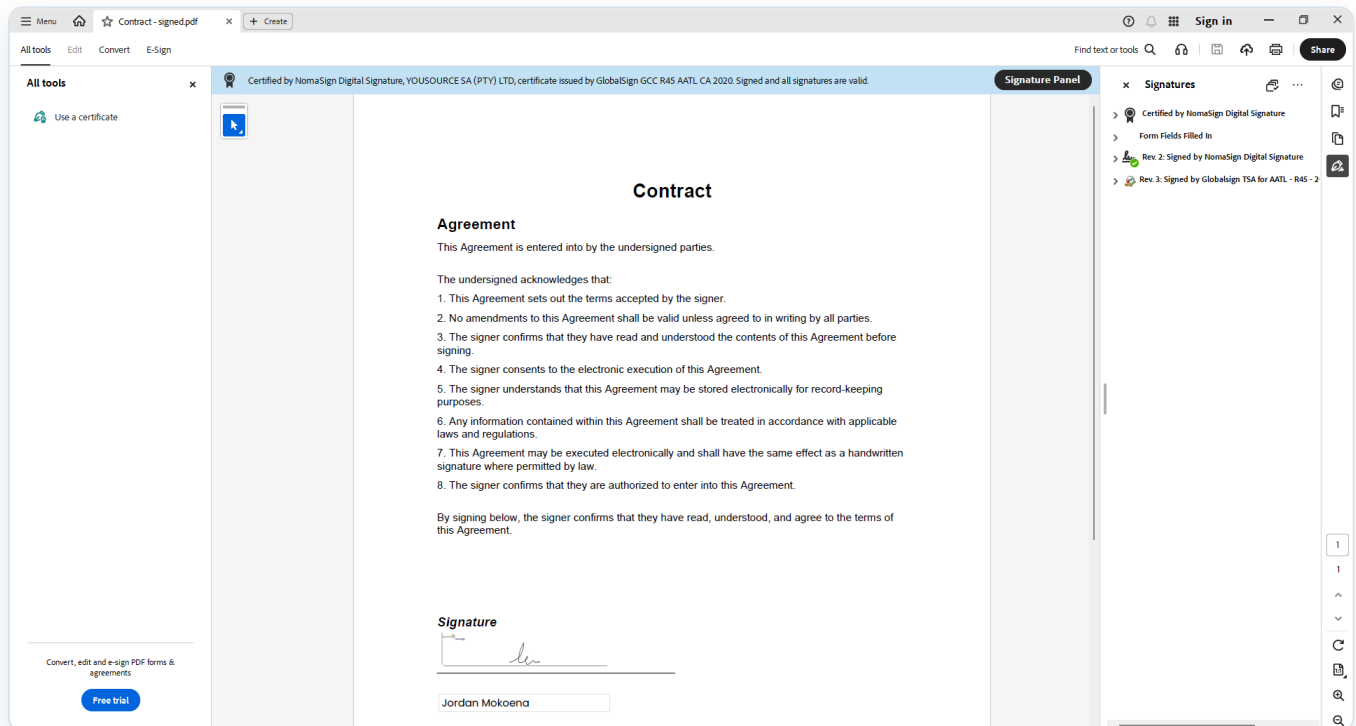

Send: your email, your signing order, your reminders

— Proof, not promises

When a signed document really matters, "trust us" is not good enough. NomaSign documents carry their proof inside the file:

- ✓ **Sealed on send.** The document is locked before the first signature, not after the last one. Most tools cannot say this.
- ✓ **Every signature is a sealed revision.** Adobe can show exactly what changed and when, and lets you view the document as it stood at every step. Later signers provably signed over earlier signatures.
- ✓ **Verified by others, not by us.** The certificate chain is on the Adobe Approved Trust List, the closing timestamp comes from an independent timestamp authority, and Adobe performs the checks on your machine.
- ✓ **Identity signals on every signature.** Email verification, IP address, and device fingerprint are recorded with each signing event.
- ✓ **A path to higher assurance.** Signing is certificate-agnostic: where regulation requires it, signer or organisation certificates (AeS/QeS) can be used.

A real NomaSign document in Adobe: certified, all signatures valid, every revision listed

Want to see it rather than read it?

Download The Proof File: a real signed document you can verify yourself in Adobe in under a minute.

— Why is it only R99?

Fair question. The signing is enterprise-grade, and the price makes people wonder what the catch is. There is no catch, there are two deliberate choices:

1. We specialise

NomaSign does signing, brilliantly. We don't rebuild a document management system you already own. Storage, folders, retention, and search stay where they already work: in your Microsoft 365 or Google Workspace.

2. Your cloud does the heavy lifting

Signed documents are stored in your own OneDrive or Google Drive, so we don't run (or charge you for) a copy of your archive. Side effect you'll appreciate: your documents stay under your control and your compliance policies.

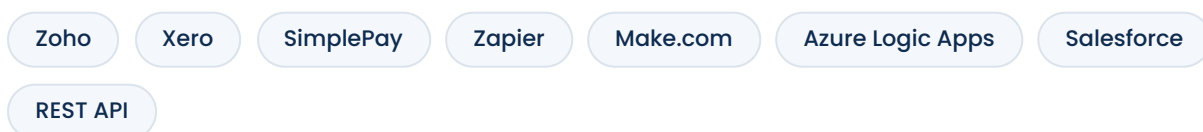

The result: one simple price, unlimited documents, and a free trial to prove it.

— Who uses NomaSign, and for what

Accountants & audit firms	Engagement letters, SARS mandates, annual sign-offs
HR teams	Offer letters, contracts, policy acknowledgements, onboarding packs (bulk send)
Consultancies & agencies	Proposals and statements of work, signed before the enthusiasm cools
Real estate	Mandates, offers to purchase, lease agreements
Manufacturers & engineering	Quotes, drawings sign-off, delivery confirmations
Software companies	Proposals, statements of work, licence agreements, or embed signing via the API

Automation, briefly

A REST API, webhooks on completion, reusable templates, and bulk send. Trigger a contract from your system, get the signed PDF and its evidence delivered back automatically. Connect NomaSign to the tools you already run:

— Is it legally binding?

Yes. Electronic signatures are recognised under South Africa's ECT Act for most business documents, and NomaSign's evidence (sealed revisions, timestamps, email verification, IP and device records) gives you a strong position if a signature is ever challenged. Some document types, such as wills and certain property transfers, still require wet ink by law. For regulated use cases requiring advanced or qualified signatures, ask us about signer certificates.

— Pricing

Plan	Price	For
Annual	R99/month (billed R1,188/year)	Best value, unlimited documents
Monthly	R149/month	Full flexibility
Enterprise	Custom	Volume pricing, higher API limits
Enterprise Self-Hosted	Custom	Run NomaSign inside your own environment

All plans: unlimited documents, unlimited team invites, templates, API and webhooks, sealed signing. Free trial on every plan, no card needed.
